## **TUNEDColor, Inc. announces release of PrintDOCTOR LFP version 2.5**

**February 18, 2009** – Abington, Pennsylvania, USA - TUNEDColor Inc. a world-wide leader in color management training and consulting for large-format printing are pleased to announce the development and latest release of the new pre-production software and sales tool designed specifically for the large-format print industry. The software called PrintDOCTOR LFP™ is a true production tool that has been termed Pre-OP (Pre-OutPut) software.

This new Version 2.5 carries bug-fixes to the metric system analysis as well as updated reference charts for drop sizes and updated algorithms for the new RIPs. Pre-OP software combines preflighting with other unique production-oriented capabilities that allow your mobile sales people to become more efficient at the point of contact with new prospective customers. PrintDOCTOR LFP™ dissects commonly used large-format files, including Acrobat PDFs, Postscript and raster formats, and delivers a diagnosis, including alerts to problems with color space, fonts, and image resolution, and many other problems that may cause a bad print. It also offers a host of production tools, including compatibility with any RIP/Printer hot folder, ink usage and media costing, as well as distributed job balancing.

Know before you Print with PrintDOCTOR LFP™ v2.5
